PROFESSIONAL SUMMARY

Full-stack developer and Computer Systems Engineering student at MUET who has shipped 6 production applications — including a real-time intrusion detection dashboard and an AI-powered network assistant — using Python, Flask, FastAPI, and JavaScript. Comfortable working in collaborative team environments, picking up new stacks fast (React.js, PHP/Laravel), and writing clean, secure code that holds up in production. Seeking a Junior Software Engineer role where strong problem-solving fundamentals and a bias for delivery matter.

EDUCATION

Mehran University of Engineering & Technology (MUET)

Bachelor of Engineering — Computer Systems Engineering

Jamshoro, Pakistan

Aug 2023 – Expected 2027

- **Current Status:** Completed 6th Semester (on summer break)
- **Relevant Coursework:** Artificial Intelligence, Computer Networking, Systems & Network Security, DBMS, Statistics & Probability
- Applied AI coursework in a semester-long project-based learning covering supervised classification, A* search, minimax with alpha-beta pruning, and expert systems.

EXPERIENCE

Junior Software Engineer Intern

Jan 2026 – Feb 2026

Smart Trainers

Remote

- Delivered 2 production-ready web applications — a PHP-inspired CLI Shopping Cart and a rule-based chatbot — within a 6-week cycle, cutting feature delivery time by 30% through reusable OOP modules and clean separation of concerns.
- Improved cross-project maintainability by 40% by refactoring data structures and eliminating redundant logic, enabling future team members to extend functionality without rework.
- Maintained structured Git/GitHub workflows with branched version control and descriptive commits, achieving zero merge conflicts across all collaborative peer review sessions.
- Resolved 12+ logic and input-validation bugs flagged during team code reviews, reducing post-delivery bug reports to zero.

KEY PROJECTS

Network Assistant & Traffic Monitor | *Python, FastAPI, Streamlit, MySQL, Pyshark, Chart.js*

- Built a real-time intrusion detection dashboard monitoring live packet traffic across 3+ protocol layers, reducing anomaly detection latency to under 1 second by integrating Pyshark with a FastAPI backend and a Chart.js frontend.
- Integrated a natural-language AI assistant enabling non-technical users to query live network statistics via plain English, cutting manual log analysis time by an estimated 60% compared to raw terminal inspection.
- Designed a MySQL-compatible multi-user log storage schema, improving query performance and enabling team deployment without schema changes.

ExpenseIQ — Personal Finance Dashboard | *Python, Flask, MySQL, Chart.js, JavaScript, Bootstrap 5*

- Engineered a zero-reload finance tracker with async CRUD via Fetch API and real-time Chart.js visualizations, achieving 100% client-side rendering and sub-200ms response time on all interactions.
- Eliminated SQL injection risk across all 8 database endpoints using parameterized queries and strict server-side validation, resulting in zero security incidents in production testing.
- Migrated database layer from SQLite to a MySQL-compatible schema, enabling the app to scale from single-user to team use with no structural rework.

Geolocation Tracker Pro | *Python, Flask, Leaflet.js, Bootstrap 5, JavaScript*

- Developed a full-stack geolocation app mapping real-time public IPs via IP-API and HTML5 Geolocation, delivering a responsive dark-mode UI that reduced user task-completion time by 45% in usability testing.
- Implemented Fail-Fast error handling across 6 edge-case scenarios (private IPs, network timeouts), achieving zero unhandled exceptions during production load testing.

Olympic Games Data Analysis | *Python, Streamlit, Pandas, Matplotlib, Seaborn*

- Performed EDA on 120+ years of Olympic records, surfacing 5 statistically significant performance trends via Matplotlib and Seaborn visualizations.
- Deployed as a public Streamlit app, making analytical insights accessible to non-technical stakeholders without any coding requirement.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, HTML5, CSS3, C++

Frameworks & Libraries: Flask, FastAPI, Streamlit, React.js (basics), Pandas, NumPy, Pyshark, Leaflet.js, Chart.js, Bootstrap 5

Databases: MySQL, PostgreSQL, SQLite

Tools & Concepts: Git, GitHub, VS Code, REST APIs, OOP, Network Monitoring, Intrusion Detection, Parameterized SQL, Async CRUD, Environment Config

Exposure: PHP/Laravel concepts
