

INAYAT ALI SHAR

Jamshoro, Sindh, Pakistan — 0300-2806306 — inayatalishar.786@gmail.com
linkedin.com/in/inayat-ali-shar — github.com/inayat-engineer

Professional Summary

Computer Systems Engineering student (6th Semester, MUET) with hands-on experience building secure full-stack web applications, real-time dashboards, and AI-powered tools. Proven ability to deliver end-to-end solutions independently — from backend architecture to interactive UI. Eager to bring technical depth and a fast-learning mindset to Telenor Shared Services' corporate environment.

Education

Mehran University of Engineering & Technology (MUET) Jamshoro, Pakistan
Bachelor of Engineering — Computer Systems Aug 2023 – Present
Current Semester: 6th — **Relevant Coursework:** Artificial Intelligence, Computer Networking, Systems & Network Security, DBMS, Statistics & Probability

Experience

Python Programming Intern Jan 2026 – Feb 2026
Smart Trainers (Remote)

- Delivered 2 production-grade Python applications (CLI Shopping Cart & Rule-Based Chatbot) within a 6-week cycle, applying OOP principles and clean modular design.
- Optimized data structure usage across both projects, reducing code redundancy and improving long-term maintainability.
- Maintained codebase via Git with structured version control, demonstrating professional development workflows in a remote team setting.

Key Projects

Network Assistant & Traffic Monitor *Python, FastAPI, Streamlit, Pyshark*

- Built a real-time IDS dashboard monitoring live packet traffic across 3+ protocol layers, detecting anomalies (port scans, traffic spikes) with sub-second alert latency.
- Integrated a plain-English AI chatbot enabling non-technical users to query live network statistics, significantly reducing analysis time versus raw log inspection.

ExpenseIQ — Personal Finance Dashboard *Python, Flask, SQLite, Chart.js*

- Built a zero-reload finance tracker with async CRUD via Fetch API, delivering real-time Chart.js visualizations with 100% client-side rendering for instant feedback.
- Hardened security with parameterized SQL (eliminating injection risk), strict input validation, and environment variable configuration.

Geolocation Tracker Pro *Python, Flask, Leaflet.js, Bootstrap 5*

- Developed a full-stack app mapping real-time public IPs via IP-API and HTML5 Geolocation, featuring a Glassmorphism dark-mode UI with CartoDB tile integration.
- Implemented Fail-Fast error handling for private IPs and network timeouts, achieving zero unhandled exceptions during production testing.

Olympic Games Data Analysis *Python, Streamlit, Pandas, Matplotlib*

- Performed EDA on 100+ years of Olympic competition data, surfacing performance trends via Matplotlib and Seaborn visualizations.
- Deployed as a public Streamlit app, making analytical insights accessible to non-technical stakeholders without any coding requirement.

Technical Skills

Languages Python, SQL, JavaScript, HTML5, CSS3, C++
Frameworks Flask, FastAPI, Streamlit, Pandas, NumPy, Pyshark, Leaflet.js, Chart.js, Bootstrap 5
Tools & Concepts Git, GitHub, VS Code, REST APIs, OOP, SQLite, Network Monitoring, Intrusion Detection

Certifications & Achievements

- Generative AI Explained** — NVIDIA (Jan 2026)
- Artificial Intelligence Essentials** — IEEE Computer Society (2025)
- Artificial Intelligence Training** — Digital Dream Dynamo (April 2025)
- Quiz Competition Participant** — All MUET Talent Hunt-V (Aug 2025)
